

# TOOLS TO HELP EASE ADOPTION OF CONVENTIONAL COMMITS

Commitizen - CLI to help format commits

Commitlint - Lint your commits

Husky - Git Hooks

A terminal window titled "Commitizen Demo" showing the execution of the 'git cz' command. The terminal displays the version information 'cz-cli@4.2.4, cz-conventional-changelog@3.3.0' and a prompt to select a commit type. The available options are: feat (A new feature), fix (A bug fix), docs (Documentation only changes), style (Changes that do not affect the meaning of the code), refactor (A code change that neither fixes a bug nor adds a feature), perf (A code change that improves performance), and test (Adding missing tests or correcting existing tests). A note at the bottom indicates that arrow keys can be used to navigate through the choices.

```
> git cz
cz-cli@4.2.4, cz-conventional-changelog@3.3.0

? Select the type of change that you're committing: (Use arrow keys)
> feat:      A new feature
  fix:       A bug fix
  docs:      Documentation only changes
  style:     Changes that do not affect the meaning of the code (white-space, formatting, missing semi-colons, etc)
  refactor:  A code change that neither fixes a bug nor adds a feature
  perf:     A code change that improves performance
  test:     Adding missing tests or correcting existing tests
(Move up and down to reveal more choices)
```
